

---

**P1 - Posters Monday**

P1.101	P. Mantica	Progress in understanding W control using ICRH in the JET-ILW tokamak
P1.102	M. Beurskens	The role of Carbon on the H-mode confinement in ASDEX Upgrade with a metal wall
P1.103	J. Ahn	MHD simulations of impurity transport during sawtooth collapse in ASDEX-Upgrade plasmas
P1.104	O. Février	Modeling of robust NTM control by ECCD in AUG
P1.105	A. Nielsen	First principle numerical simulations of the SOL in ASDEX Upgrade
P1.106	A. Jacobsen	Determining fast-ion velocity-space distribution functions using velocity-space tomography
P1.107	Y. Gao	Effects of 3D magnetic perturbation on divertor heat load redistribution on ASDEX Upgrade
P1.108	G. Granucci	Stable operation at disruptive limits by means of EC at ASDEX Upgrade
P1.109	J. Vicente	Dynamics of filaments in the vicinity of the separatrix during ELM cycles
P1.110	V. Nikolaeva	Dependence of poloidal asymmetries of the edge turbulence on the magnetic configurations in ASDEX Upgrade
P1.111	L. Guimaraes	LFS/HFS edge density profile dynamics on ASDEX-Upgrade
P1.112	M. Maraschek	Real-time control of MHD instabilities using ECCD in ASDEX Upgrade
P1.113	L. Shao	On the role of the edge density profile for the L-H transition power threshold in ASDEX Upgrade
P1.114	V. Igochine	Beta limit and plasma response to n=1 perturbations in ASDEX Upgrade
P1.115	E. Wolfrum	Effect of magnetic perturbations on pedestal, SOL and divertor in high collisionality plasmas at ASDEX Upgrade
P1.116	B. Geiger	Measurement and interpretation of active Balmer alpha spectra at ASDEX Upgrade
P1.117	R. Fischer	Effect of toroidal plasma rotation on the magnetic equilibrium of beam-heated plasmas
P1.118	R. McDermott	Diffusive and non-diffusive contributions to momentum transport in AUG experiments and the European intrinsic rotation database
P1.119	V. Rohde	Erosion of metal plasma facing components by arcing at the inner divertor baffle of ASDEX Upgrade
P1.120	B. Kurzan	Electron density and temperature structures during edge localized modes in the edge plasma of ASDEX Upgrade
P1.121	R. Dux	A forward model for beam emission spectroscopy at ASDEX Upgrade
P1.122	A. Gude	Automated sawtooth detection with multi-signal analysis
P1.123	S. Fietz	Study of suppressed tearing modes seeded with non-axisymmetric magnetic perturbation fields at the ASDEX Upgrade tokamak
P1.124	E. Viezzer	Ion heat and momentum transport in the edge pedestal of ASDEX Upgrade
P1.125	G. Birkenmeier	Characterisation of Pulsations Close to The L-H Transition in AUG
P1.126	G. Tardini	Characterisation of a Compact Neutron Spectrometer and unfolded neutron emission spectra in ASDEX Upgrade
P1.127	P. Lang	Controlled fuelling of high density scenarios at ASDEX Upgrade in support

---

		of ITER and DEMO
P1.128	A. Lessig	Non-linear simulations of ELMs in ASDEX Upgrade including diamagnetic drift effects
P1.129	K. Krieger	Efficiency of surface shaping for protection of leading edges in the divertor of ASDEX Upgrade from direct plasma exposure
P1.130	M. Cavedon	Study of the edge radial electric field during the L-H transition at ASDEX Upgrade
P1.131	R. Ochoukov	Evolution of ELMy H-mode performance in presence of core radiation on ASDEX Upgrade
P1.132	M. Willensdorfer	Kinetic profiles during MP-field induced ELM mitigation at low $v^*$
P1.133	T. Odstrcil	SXR tomography of tungsten radiation patterns with and without MHD
P1.134	G. Pautasso	Generation and suppression of runaway electrons in ASDEX Upgrade disruptions
P1.135	M. Bernert	High radiation scenarios with radiation inside the confined region at ASDEX Upgrade
P1.136	S. Potzel	On the high density in the HFS far SOL at ASDEX Upgrade and its impact on plasma confinement
P1.137	A. Lebschy	Indirect measurement of the poloidal rotation in the core of ASDEX Upgrade plasmas with charge exchange recombination spectroscopy
P1.138	D. Vezinet	Experimental characterisation of sawtooth crash precursors on ASDEX Upgrade via Soft X-Ray tomography
P1.139	G. Fuchert	Prediction of the blob generation rate at ASDEX Upgrade
P1.140	D. Brida	Impurity transport in ASDEX Upgrade with magnetic perturbations
P1.141	S. Kwak	Lithium BES Data Analysis via Bayesian Modelling at JET
P1.142	M. Weiland	Influence of ion cyclotron heating and MHD instabilities on the fast-ion distribution in ASDEX Upgrade
P1.143	A. Burckhart	Design and commissioning of the new Imaging Motional Stark Effect diagnostic at ASDEX Upgrade
P1.144	P. Piovesan	High-resolution internal measurements of 3D plasma response for model validation in high-beta plasmas
P1.145	C. Piron	Real-time simulation of internal profiles in the presence of sawteeth using the RAPTOR code and applications to ASDEX Upgrade and RFX-mod
P1.146	A. Martitsch	Evaluation of the neoclassical toroidal viscous torque in ASDEX Upgrade
P1.147	F. Laggner	The effects of triangularity and main ion species on the inter-ELM profile evolution in ASDEX Upgrade
P1.148	L. Horváth	Fast changes in the mode structure of chirping energetic particle driven modes
P1.149	S. Mastrostefano	MHD modes analysis in high-beta ASDEX Upgrade configurations including a 3D model of conductors
P1.151	S. Costea	Investigation on radial transport of poloidal momentum in the SOL of AUG during the L-I-H transition
P1.152	S. Kálvin	Different methods to determine the total Prad for fusion devices
P1.153	H. Doerk	Turbulence stabilization due to high beta and fast ions in high-performance

		plasmas at ASDEX Upgrade and JET
P1.154	R. Dinca	Development and first operations of the IShTAR test facility
P1.155	S. Ratynskaia	Dust remobilization under normal and ELM-like conditions: controlled experiments in Pilot-PSI
P1.156	L. Vignitchouk	Heating and accumulation sites of metallic dust in fusion devices
P1.157	L. Zeng	Influence of radiation on the energy spectrum of runaway electrons during tokamak disruptions
P1.158	P. Denner	An investigation of the plasma response to applied RMPs on TEXTOR
P1.159	S. Garland	Effect of magnetic field geometry on blob structure and dynamics in TJ-K
P1.160	B. Schmid	Investigation of the energy transfer to zonal flows at the stellarator TJ-K
P1.161	M. Rack	A hybrid fluid-kinetic approach for 3D plasma edge transport in He-plasmas at Wendelstein 7-X
P1.162	T. Andreeva	Estimation of Wendelstein 7-X magnetic field perturbation due to permeable materials
P1.163	T. Windisch	Reflectometry fluctuation diagnostics at Wendelstein 7-X
P1.164	G. Kapper	Modeling of electron cyclotron current drive for finite collisionality plasmas in Wendelstein 7-X
P1.165	C. Wersal	The interaction between neutral particles and turbulent plasma in the tokamak SOL
P1.166	J. Citrin	Real-time capable first principle based modelling of tokamak turbulent transport
P1.167	A. Christensen	Simulation of plasma source behavior for neutral gas puff modulation
P1.168	M. Løiten	Simulations of drift-wave turbulence in the presence of neutrals in a cylindrical plasma
P1.169	I. Miron	Kinetic resonances effect on magnetic braking in tokamaks
P1.170	P. Dinca	Characterization of RF Deuterium Plasma Used for Fusion Related Thin Mixed Films
P1.171	D. Zarzoso	Impact of rotating magnetic islands on density flattening and turbulent transport
P1.172	J. Loizu	Plasma ideal response to a non-axisymmetric boundary perturbation
P1.173	G. Papp	Towards self-consistent runaway electron modelling
P1.174	E. Poli	Scattering of electromagnetic wave beams from density fluctuations in tokamak plasmas
P1.175	D. Meshcheriakov	Representation of finite amplitude ideal magnetohydrodynamic modes
P1.176	P. Aleynikov	Relativistic runaway electrons in the near-threshold electric field
P1.177	C. Day	Status of divertor particle exhaust modelling activities at KIT
P1.178	A. Sudnikov	Helical mirrors for active plasma flow suppression in linear magnetic traps
P1.179	A. Anikeev	Mirror based fusion neutron source: R&D status and applications
P1.180	A. Ivanov	Status of 1MV, 1MW, 100 S neutral beam development based on negative ion surface -plasma source.
P1.181	V. Yanovski	Plasma surface currents in the presence of a resistive wall and their

---

		connection to Halo currents during disruptions in tokamaks
P1.182	Y. Zhang	Multiple domains scheme for heat transport analysis in plasmas with magnetic islands: a first study
P1.183	C. Albert	Toroidal rotation in resonant regimes of tokamak plasmas due to non-axisymmetric perturbations in the action-angle formalism
P1.184	B. Maljaars	Simultaneous control of plasma profiles and neoclassical tearing modes with actuator management in tokamaks
P1.185	A. Palha	Mimetic spectral element method for the Grad-Shafranov equation
P1.186	P. Zestanakis	Numerical Action-Angle transform for Guiding-Center particle motion in Axisymmetric Tokamak equilibria.
P1.187	K. Hizanidis	Multiple scattering of radio frequency waves by blobs: Homogenization of a mixture of blobs and the Waterman-Truell approach
P1.188	P. Mc Carthy	Advanced divertor equilibrium calculations with finite current density
P1.189	A. Köhn	Perturbations of microwaves due to plasma density fluctuations
P1.190	M. Held	Full-F gyrofluid edge turbulence computations in 2D slab and 3D toroidal geometry
P1.191	O. Meyer	Isotope effects on zonal flows and geodesic acoustic mode in gyrofluid edge turbulence simulations
P1.192	L. Zsuga	Statistical analysis of the oscillations preceding ELM instabilities
P1.193	S. Espinosa	Is turbulence actually reduced at the tokamak edge pedestal?
P1.201	H. Ahmed	Chromatic guiding and re-acceleration of intense laser accelerated proton beam by helical coil target
P1.202	A. Aliverdiev	About the shock dynamics induced by complex spot laser-irradiation of layered targets
P1.203	S. Atzeni	Source neutron spectra and temperature diagnostics of ICF plasmas: models and 1D and 2D simulations
P1.204	T. Audet	Development of an injector for multi-stage laser wakefield acceleration
P1.205	M. Bailly-Grandvaux	External magnetic field pinching effect on a relativistic electron beam in dense matter
P1.206	A. Balzarini	Initialization of charged particle beam in OSIRIS
P1.207	D. Bara	Nonthermal effects on laser ion acceleration with two electron temperature distribution function
P1.208	A. Boné	Quantitative shadowgraphy for laser-plasma interaction
P1.209	R. Cairns	Pellet ignition using ions shock accelerated in the corona
P1.210	P. Carneiro	QED multi-dimensional vacuum polarization solver
P1.212	S. Chandra	Modulational instability of electron acoustic waves in finite temperature quantum plasmas containing electrons at two different temperatures
P1.213	F. Chen	Primary experimental study of foam embedded quasi-spherical wire-array Z-pinch
P1.214	T. Chodukowski	Investigation of spontaneous magnetic fields generated under different regimes of laser-produced plasma creation
P1.215	Y. Chu	Characterization and optimization of the quasi-spherical wire-array implosion based on a multi-element model

---

P1.216	G. Claps	GEMpix detector: a new diagnostic for Laser Produced Plasmas monitoring
P1.217	J. Clarisse	Hydrodynamic analysis of self-similar radiative ablation flows
P1.218	D. Del Sorbo	Nonlocal transport studies with a first moment kinetic model based on an entropic closure
P1.219	J. Dong	Rayleigh-Taylor instability experiments in shocklessly compressed Al foils accelerated by laser-driven plasma loaders
P1.220	R. Ducloux	Non thermal electron-ion Bremsstrahlung: Deterministic and stochastic description
P1.221	S. Efimov	Spectroscopy of the plasma formed inside a copper tube by spherically converging strong shockwave
P1.222	B. Eliasson	Laser diffraction effects on the Rayleigh-Taylor instability of a radiation pressure accelerated thin foil
P1.223	M. Fajardo	X-ray emission by an XFEL produced plasma
P1.224	I. Fitis	Progress of the initial times of single wire explosion for plasma generation through numerical and experimental method
P1.225	R. Florido	Implosion core dynamics in OMEGA experiments driven with shaped laser pulses
P1.301	S. Cho	Charging dusts density and their effects on background plasma in large RF Helium plasma
P1.302	M. Dosbolayev	Properties of buffer and dusty plasma in combined RF+DC discharge
P1.303	D. Lapitsky	Drag forces acting a charged microparticle in an alternating quadrupole electric field
P1.304	M. Lee	Nonthermal effects on the dust acoustic surface waves in a Lorentzian dusty plasma slab
P1.305	A. Leonovych	Combined high frequency and arc plasma sources for contacts application
P1.306	I. Lisina	The distribution of kinetic energy in the system of particles with nonreciprocal quasi-dipole interaction
P1.307	M. Myasnikov	Structural transitions in small dust clusters
P1.308	K. Statcenko	Interaction forces between dust particles in a DC discharge plasma
P1.309	A. Scurtu	Efficiency of Martian dust simulant removal from surfaces in vacuum with pulsed plasma jet
P1.310	A. Timofeev	Divergence of dust particle trajectories in a model of dusty plasma
P1.311	E. Vasilieva	Study of a global orientational order parameter for analysis of the phase state of small-sized monolayer dusty plasma structures
P1.401	O. Embreus	Numerical calculation of ion runaway distributions
P1.402	L. Fazendeiro	Energy partition in kinetic turbulence in strongly magnetized plasmas
P1.403	R. Gueroult	Rotation and ion separation effects in magnetized plasmas
P1.404	Q. Haque	ITG driven vortices with dust charge fluctuations non-Maxwellian electrons
P1.405	E. Hirvijoki	Gaussian Radial Basis Functions: a new approach to collisional dynamics
P1.406	V. Karakhtanov	The influence of electron-electron scattering on the asymptotic behaviour of the strongly degenerate plasma electrical conductivity
P1.407	S. Kuhn	Bohm-criterion approximation versus optimal matched solution for a spherical probe in radial-motion theory

---

P1.408	D. Lee	An analysis of supersonic plasma flow by electric probes
P1.409	T. Liseykina	Modelling of ion-acoustic shocks with reflected ions
P1.410	A. Lopes	Radiation tension in plasma metamaterials
P1.411	M. Malekshahi	Absorption coefficient profile along the ultra short laser pulse propagating through air by Kramers-Kronig relation
P1.412	R. Numata	Energy partition in kinetic turbulent reconnection
P1.413	M. Romé	Wavelet analysis of magnetized pure electron plasma turbulence and dependence on the initial-state fluctuations

---
